### Objective

The overall goal of a CDI program is to **improve clinical documentation, coding, and reimbursement**. From a reimbursement perspective, an effective CDI program can reduce denials and improve the appeals process using improved clinical documentation.

### Learning outcomes:

- Ensures increased revenue as a result of more accurate medical coding and reduced errors that could have led to decreased revenues.
- Timely reimbursements are assured as there are no delays due to incorrect medical documentation.
- Helps in identifying the correct risk adjustment scores which can lead to better treatments and outcomes for the patient, which also enhances the hospital's reputation.
- It can help healthcare providers make a smooth transition to the pay-for-quality or value model from the fee-for-service model, which by itself will bring in more patients and improve clinical outcomes in the long term.
