COLLEGE OF PHARMACY,  
KOMARAPALAYAM.

**No. of students enrolled: 294**

**No. of students certified: 287**

**No. of students certified in our institution: 26**

#### Objective:

The overall objectives of antiepileptic therapy is to prevent seizures and avoid untoward side effects with a regimen that is convenient and easy to follow. People with epilepsy usually initiate treatment with one antiepileptic drug at the time of diagnosis, but 30 percent of patients will be refractory to this medication.

#### Learning outcomes:

Diagnosis of epilepsy can be difficult. A number of other conditions may present very similar signs and symptoms to seizures, including syncope, hyperventilation, migraines, narcolepsy, panic attacks and psychogenic non-epileptic seizures (PNES). In particular a syncope can be accompanied by a short episode of convulsions. Nocturnal frontal lobe epilepsy, often misdiagnosed as nightmares, was considered to be a parasomnia but later identified to be an epilepsy syndrome. Attacks of the movement disorder paroxysmal dyskinesia may be taken for epileptic seizures. The cause of a drop attack can be, among many others, an atonic seizure.

## CIRCULAR

This is informed to the B. Pharm-I, II, III, IV Students that the following **workshop** can be conducted by the Department of Pharmaceutics, JKKMMRF'S ANNAI JKK SAMPOORANI AMMAL COLLEGE OF PHARMACY, KOMARAPALAYAM and it will be commenced as per the schedule:

WORKSHOP NAME	SCHEDULE	DURATION	VENUE	RESOURCE PERSON
RECENT STRATEGIES TO TREAT EPILEPSY	10.11.2019	3 HOURS	SEMINAR HALL	Dr.S.CHANDRA Mr.R.SURESH

All the above-mentioned students must enroll and actively participate in the course without fail.

**NOTE:** Certificates should be issued to all the students after completion of the course and examination.

**Subject: Letter for requesting Permission to Conduct an one day seminar regarding: -**

**Respected Sir,**

We Are writing this letter to request permission to conduct an one day workshop in the **SEMINAR HALL** on 10.11.2019. We wish to conduct workshop regarding the **RECENT STRATEGIES TO TREAT EPILEPSY**. We request you to kindly permit to conduct workshop program as this would be a great opportunity for Students to learn and that would help a great deal to shape the students.

Looking forward to hearing from you.

Thank you,

Yours sincerely,

Head of the Department

## DEPARTMENT OF PHARMACEUTICS

### ONE DAY WORKSHOP ON RECENT STRATEGIES TO TREAT EPILEPSY

#### ABOUT THE WORKSHOP

The first major application of pharmacogenetics in epilepsy, and probably still the most widely applicable, has been the identification of patients from South East Asia who are HLA-B\*1502 positive, putting them at high risk for Stevens–Johnson syndrome from carbamazepine and the elimination of this life-threatening complication by pre-treatment screening . Genetic understanding is creeping into other areas of pharmacological therapeutics. It has been realized for a number of years that sodium channel blocking drugs may be deleterious for children with Dravetsyndrome , although this may not be so clear for adult patients . It is now known that Dravet syndrome is commonly due to a genetic truncations leading to total loss of function or missense mutations causing partial loss of function of the sodium channel, usually SCN1A , which is located on inhibitory interneurons and causes hyperexcitability and seizures as a result of loss of function. A previously empirical observation of relative AED efficacy is now underpinned by a mechanistic understanding, which can guide drug choice. Mutations of the SCN8A gene are also associated with epilepsy, sometimes with a Dravet-like syndrome . However, the phenotype may depend on the pathophysiology of the mutation, which may be a gain or a loss of function . In four children with epileptic encephalopathy onset in the first months of life, Boerma described a response to phenytoin . One of these had been demonstrated to have a gain of function mutation.
