Details of miscellaneous facilities

s.no	Particulars	Description
1.	Solar plant	Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use – electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural land.
2.	Wheel chair	A wheelchair is a manually operated or power-driven device designed primarily for use by an individual with a mobility disability for the main purpose of indoor, or of both indoor and outdoor, locomotion.
3.	Lift	Lifts are only accepted into the building warrant of fitness scheme if they comply with the standard they were installed
4.	CCTV Surveillance	CCTV (Closed Circuit Television) is a closed system consisting of video cameras, display devices (monitors) and wired or wireless data networks that allow you to transfer images from video cameras to monitors.
5.	Rain water harvesting	Rainwater harvesting (RWH) is the collection and storage of rain, rather than allowing it to run off. Rainwater is collected from a roof-like surface and redirected to a tank, cistern, deep pit (well, shaft, or borehole), aquifer, or a reservoir with percolation, so that it seeps down and restores the ground water.
6.	Generator	Electric generator, also called dynamo, any machine that converts mechanical energy to electricity for transmission and distribution over power lines to domestic, commercial, and industrial customers. Generators also produce the electrical power required for colleges, schools, automobiles, aircraft, ships, and trains.
7.	Reprography section	It is means reproduction of printed or written matter. Reprography comprehends processes and methods used for both copy and duplicating (multicopies) of documents. Reprography is now internationally accepted term which replaces the earlier 'document copying' or 'documentary reproduction'.
8.	RO plant	A reverse osmosis plant is a manufacturing plant where the process of reverse osmosis takes place. Reverse osmosis is a common process to purify or desalinate contaminated water by forcing water through a membrane.
9.	First aid room	A first aid room or medical room, also known as an infirmary, is a room in an establishment to which someone who is injured or taken ill on the premises can be taken for first aid and to await the arrival of professional emergency medical services.
