Solar Power Plant

The use of conventional energy by JKKMMFR's has been partially replaced by renewable energy source. In 2022 JKKMMFR's erected a solar rooftop plant with a capacity of 5 kW from which of the institute receives an unerupted power supply and has significantly reduced energy cost.

It can support these loads continuously at night since it is paired with hybrid inverters and also includes charge controllers to control batteries.

Solar Power Plant

Green campus initiatives

As per the green practices in the campus, JKKMMRF's is moving in the direction of a Green Institution by planting more trees in and around the campus. Many herbals plants and herbal garden and fruit trees have been planted to make optimal use of the land available. The garden consists of local species of trees which make the campus cool during hot summer months and improves the ambience of our campus.

The following green campus initiatives are available at our institution:

Rainwater Harvesting

The institution has a rainwater harvesting system to ensure the supply of ground water. Rainwater harvesting is done at several points throughout the campus. The rainwater gathering pits were built according to industry standards. Rainfall is directed through wide shallow ditches that run the length of the campus, ensuring rainwater conservation. All open terraces are equipped with rainwater collection pipes that are routed to the ground via planned drains. Drainage from the entire building flows to the lower floor via an exterior drain.

Rainwater harvesting point.
