Abstract

Herbal or Phyto medicines have been used since time immemorial as a form of traditional medicine systems and practices like Ayurveda, Siddha, Unani, and homeopathy. This medical system uses herbal medicines, or phytomedicines that are extracted from herbal plants, for the treatment of diverse diseases. People in developing countries such as Asia and Africa rely on herbal medicines for the treatment of various diseases the most because it is believed that they are cheaper, more effective, and risk-free. Herbal medicines are preferred over modern med-
