REPORT

Seminar on Plant based drug Practice on contagious diseases

RESOURCE PERSONS

Dr.K.Vasuki M.Pharm., Ph.D

Swamy Vivekanandha College of Pharmacy,
Namakkal

Dr. P.Satheesh Kumar M.Pharm., Ph.D

JKKMMRF's Annai JKK Sampoorani Ammal
College of Pharmacy, Komarapalayam

No. of students enrolled: 320

No. of students certified in our institution: 33

No. of students certified: 320

On Dec.20..2019, the **Department of Pharmacognosy** at JKKMMRF's ANNAI JKK Sampoorani Ammal College of Pharmacy held a seminar on Plant based drug Practice on contagious diseases in the Seminar hall. The seminar was attended by 320 students and was certified by the college.

The seminar began with an introduction to Plant based drug Practice on contagious diseases and its importance in research studies. The speaker discussed the different varieties of plant species and its usage in various contagious diseases.

The speaker also covered the steps involved in the proper compounding of the various plant formulations and its method of preservation and usage.

The students participated actively in the seminar, asking questions and engaging in discussions and received feedback from the speaker.

Overall, the seminar was well-received by the students and provided them with valuable knowledge and skills in enforcement of IP rights. The Department of Pharmaceutical chemistry at JKKMMRF's Annai JKK Sampoorani Ammal College of Pharmacy is committed to providing high-quality education and training to its students and plans to hold similar seminars in the future.

DEPARTMENT OF PHARMACOGNOSY

ABOUT THE COURSE

Our planet since development has experienced a greater perspective of growth. Constituting millions of species exhibiting different kinds of relationships producing both correlational and mutual growth, sums up to the widespread evolutionary changes we see today. Mankind as a separate entity within the avalanche of species plays a greater share of the role and thus contributes greatly to the growth and existence of this planet. After having to battle with interspecies 'fight and survive' relation within his colony conditioning him into psychological, social, and emotional, problems; he unquestionably relates with other species in an interspecies relationship. Though this interspecies relationship does not produce only negative outcomes and raises positive outcomes as well, a great deal of it is a threat to mankind's survival and growth. One interspecies relationship that mankind experiences mutual benefits is that with plants and with species such as those of some virus, bacterial, protozoans, etc., he experiences a parasitic relationship with a lot of negative outcomes.

At the dawn of civilization, dating back to hundreds of years, snake venom was drunk intending to confer immunity to snake bites. At a similar time, it was found that smearing cowpox on torn skin induces the body to fight against smallpox. Forwarding to 1796, Edward Jenner who is popularly known as the founder of vaccinology in the West was successful in his attempt in the discovery of a solution that will later impact civilization till this day by inoculating a 13-year-old-boy with vaccinia virus (cowpox) and demonstrated immunity to smallpox leading to the discovery of the smallpox vaccine three years later. After this concept underwent medical and technological changes the years ahead, the concept of vaccine and vaccination has been employed across almost every corner of the world and enormous benefits reaped as well.

Medicinal plants worked magic for the ancient men and survived them and their generation. If care, enough urgency, and resources are directed towards the preservation of plants, medicinal plants will change the perspective of medicine and impacts generations to come. If we stay adamant and watched as many species of plants suffer extinctions, the world will lose this greater facet of nature and there will be no room to contain the mayhem. Diseases are with us. The world might record new outbreaks of infectious diseases, but with strategic plans that do not exclude interventions geared towards the wellbeing of medicinal plants, any kind of infectious disease can be easily controlled.
