Subject: **Letter for requesting Permission to Conduct an one day WORKSHOP regarding: -**

Respected Sir,

We Are writing this letter to request permission to conduct an one dayworkshop in the SEMINAR HALL on **05.03.2021** . We wish to conduct workshop regarding **THE NOVEL UTILIZATION AND OPERATION ON DISSOLUTION APPARATUS** . We request you to kindly permit to conduct the workshop program as this would be a great opportunity for Students to learn and that would help a great deal to shape the students.

Looking forward to hearing from you.

Thank you,

Dr. N SENTHILKUMAR,
PRINCIPAL,

**JKK MUNIRAJAH MEDICAL RESEARCH FOUNDATION
ANNAI JKK SAMPOORANI AMMAL COLLEGE OF PHARMACY,
ETHIRMEDU KOMARAPALAYAM - 638 183.
NAMAKKAL DISTRICT, TAMILNADU.**

Yours sincerely,

Head of the Department

CIRCULAR

This is informed to the B. Pharm-I, II, III, IV Students that the following **workshop** can be conducted by the Department of Pharmaceutics, JKKMMRF'S ANNAI JKK SAMPOORANI AMMAL COLLEGE OF PHARMACY, KOMARAPALAYAM and it will be commenced as per the schedule:

WORKSHOP NAME	SCHEDULE	DURATION	VENUE	RESOURCE PERSON
THE NOVEL UTILIZATION AND OPERATION ON DISSOLUTION APPARATUS	05.03.2021	3 HOURS	SEMINAR HALL	Dr.S.CHANDRA Mr.R.SURESH

All the above-mentioned students must enroll and actively participate in the course without fail.

NOTE: Certificates should be issued to all the students after completion of the course and examination.

REPORT SUMMARY

DATE: 05.03.2021

Duration of the Course	3 HOURS
Total participants Enrolled	105
Successfully Completed	105
Type of Feedback Assessment	Multiple Choice Questions (MCQ's)
workshop Outcome	Students know about there are seven different types of dissolution apparatus defined in the United States Pharmacopeia (USP) working principal and uses of these apparatus like -basket type, paddle type, reciprocating cylinder, flow through cell, paddle over disc, rotating cylinder, and reciprocating disc

Feedback Question Analysis – Question Asked-Feedback Rating

1.Satisfaction	6.Like to learn more about this topic
2.Clarity	7.Rate the content of the slides/virtual aid
3. Percentage of the information was new	8.Accuracy of the sessions
4.Informative	9.Session expectations
5.Technical issues	10.Rate the content of the seminar

DEPARTMENT OF PHARMACEUTICS

ONE DAY WORKSHOP ON THE NOVEL UTILIZATION AND OPERATION ON DISSOLUTION APPARATUS

ABOUT THE WORKSHOP

USP Apparatus 3 (reciprocating cylinder) is a very versatile device for the *in vitro* assessment of release characteristics of solid oral dosage forms, because it enables the product to be subjected to different dissolution media and agitation speeds in a single run. In this paper, a brief history and a description of this system are presented, along with its applications in the development of immediate and modified release products and in the simulation of fasted and fed states using biorelevant media. Furthermore, a comparison is made with the basket and paddle apparatus, especially highlighting the superior hydrodynamics of USP apparatus 3, since the results are not sensitive to factors such as the presence of sample collection probes or air bubbles in the dissolution medium.

USP apparatus 3 has important advantages over the basket and paddle apparatuses in the assessment of *in vitro* dissolution characteristics of modified-release dosage forms. As the apparatus is very versatile, its application is not restricted to extended-release products, and it may also be used for other solid oral dosage forms, such as immediate-release forms, and it is a useful tool in the simulation of fasted and fed states, using biorelevant media.

Bioavailability and, consequently, the therapeutic effects of orally-administered medicinal products depend on the dissolution of the active ingredient in gastrointestinal fluids, as well as its permeation through the membrane of the small intestine. Where the absorption process is rapid, dissolution may be the stage that controls the introduction of the drug into the bloodstream. This, in turn, led to universal recognition that the dissolution test is indispensable in the development, quality assurance and post-marketing authorization modifications of solid oral dosage forms

Furthermore, in the context of the Biopharmaceutics Classification System (BCS), proposed by the dissolution test, together with bioavailability studies, has become an essential tool for the establishment of an *in vitro-in vivo* correlation (IVIVC) (FDA, 2000).

With regards to the apparatuses used in the dissolution test, the basket apparatus (USP apparatus 1) was the first to be adopted by the U.S. Pharmacopeia in 1970, while the paddle apparatus (USP apparatus 2) was recognized in 1978, as the result of ongoing developments in the area and a growing interest in matters related to dissolution

However, research in the field of modified release dosage forms has indicated that, in order to obtain a correlation between *in vitro* dissolution results and the bioavailability of these products (*in vitro-in vivo* correlation), it would be essential for the pH, composition, ionic strength, viscosity and agitation speed of the medium to be sequentially altered during the dissolution test, thus simulating passage of the product through the gastrointestinal tract
